Git Commit Strategy

```
# Step 1 - Clone Streetify_Backup locally
git clone <Streetify_Backup_URL>

# Step 2 - Add Streetify_origin as the push remote
git remote add origin <Streetify_origin_URL>

# Step 3 - Each member creates their own feature branch
git checkout -b feature/lahiru-user-auth          # Lahiru
git checkout -b feature/chanuka-ride-booking      # Chanuka
git checkout -b feature/tharindu-trip-telemetry   # Tharindu
git checkout -b feature/daham-payment             # Daham
git checkout -b feature/mithun-review-dispute     # Mithun
git checkout -b feature/vidura-admin-system       # Vidura

# Step 4 - Stage ONLY your files (example: Daham)
git add streetify-backend/src/main/java/com/streetify/service/PaymentService.java
git add streetify-backend/src/main/java/com/streetify/service/payment/
git add streetify-backend/src/main/java/com/streetify/controller/PaymentController.java
git add streetify-frontend/src/screens/Payment.tsx
git add streetify-frontend/src/screens/History.tsx

# Step 5 - Commit with ID in message
git commit -m "feat(payment): Strategy pattern + PaymentService - Daham IT25102225"

# Step 6 - Push & open Pull Request → merge into main
git push origin feature/daham-payment
```
